- 1. Developing multidimensional approaches to examine the mechanisms whereby the left ventricle responds to injury;**
- 2. Applying the knowledge gained to develop therapeutic strategies to prevent, slow, or reverse the progression to heart failure; and**
- 3. Disseminating our results to general, scientific, and medical communities.**

 - Spring 2014- hosted Discovery U Students in my lab. This program is designed to bring local high school students from Clinton High School and Madison Central High School to the UMMC campus where they can observe and learn about biomedical research. The basic structure of the program involves the 20 students traveling to our campus where they are divided into 2 person groups to observe the functioning of a real world research laboratory in a series of three week rotations. Each visit was about 2 hours, and every third week the students rotated to a different laboratory.
